

It ^{is} aint easy bein' green...

Everyone wants to save energy and protect the environment. We provide a one stop shop to help building owners and facility managers reduce their overall energy consumption. We do this by pulling together our partners (ECP or Energy Conservation Partners) in the construction industry which include design firms, electrical and mechanical engineers, technicians, renewable energy suppliers, utility companies, energy auditors, subcontractors, commissioning agents and others to provide you the owner a comprehensive approach to reducing your building energy consumption. These are the people, suppliers and companies we have built relationships with over the last 15 years. We leverage this collective knowledge to customize an approach to help you save energy.

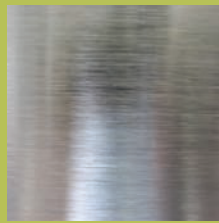

Scoping audits through Idaho Power's Custom Efficiency Program (complimentary for qualifying businesses) provide you with a prioritized list of potential energy saving strategies to lower your energy consumption. For more on Idaho Power's Custom Efficiency Program go to <http://www.idahopower.com/customefficiency>

About Energy Conservation Partners (ECP) • ECP is a brand new service of Ellsworth Kincaid Construction. ECP has the full backing of our general construction company, which means you get the same professional service you have come to expect. With our experience we can provide you - our customer - with value added services by bringing together the right team that can both customize energy saving strategies and execute the work.

We believe in working with everyone involved on a project collaboratively and face to face at all levels of our organization. Using this approach we can accurately define the overall project, produce effective solutions and deliver the desired functional quality on time and within desired budget parameters.

Building Efficiency for New Construction • Whether it's a major renovation, addition to existing buildings or a new building we can help design and build your project with energy saving design features that exceed code. Many of the costs for these features can be offset quickly with the help of incentives from Idaho Power.

We can build you a LEED certified project or just help you incorporate the most cost effective energy saving features into your new construction project.

Reduce energy, benefit the bottom line, and help improve the environment.
